Email: hariwork79@gmail.com

Linkedin: [linkedin.com/in/hari](https://www.linkedin.com/in/hari)

Mobile: +917009419095

Location: Gurugram

EDUCATION

Thapar Institute of Engineering and Technology
Bachelor of Technology – Electronics and Computers; CGPA: 7.67

Patiala, India
August 2021 - June 2025

SKILLS SUMMARY

- **Languages:** C++, Python, JavaScript, Dart, SQL, HTML5, CSS3
- **Web/Frameworks:** React, Next.js, Node.js, Express.js, Flutter, Git, AWS, Firebase, MongoDB, MySQL, Cloudinary, Postman, Selenium, Android Studio, Tailwind CSS, JWT, New Relic, Monti Apm

WORK EXPERIENCE

QuickReply – Full Stack Developer | May 2025 - Present

Gurugram, India

B2B SaaS platform for Whatsapp marketing automation serving 300+ active companies

- Led migration of a core service from a Meteor.js monolith to a Node.js/TypeScript microservice with a React frontend, architecting 30+ REST APIs across 60+ modules with strict typing, standardized error handling, and well-defined service boundaries.
- Built reusable domain-driven backend modules (entity → repository → service → controller) enabling safe partial database updates, internal microservice proxying, and Stripe payment integration, following SOLID principles and Result-type error handling with ESLint-enforced code quality.
- Engineered a provider-agnostic OAuth 2.0 / OpenID Connect SSO system for partner accounts with configurable provider response mapping, nonce-based CSRF-safe state handling, secure token exchange, and partner-scoped login orchestration.
- Designed and deployed a serverless AWS billing pipeline using SQS-triggered Lambda, processing daily settlements for 1,000+ customers with idempotent execution via MongoDB deduplication and CloudWatch metrics for real-time failure monitoring.
- Optimized broadcast campaign microservice queries on millions of records, achieving 3× faster response times and reducing QA validation cycles by 50%.
- Enhanced workflow Wait Nodes with dynamic scheduling and type-safe Zod validation, reducing configuration errors by 40% and enabling more flexible production workflows.

GetCoplayHelp – Software Engineer | Jan 2025 - May 2025

Bangalore, India

- Automated copay enrollment with Selenium (undetected_chromedriver), cutting manual effort by 35% across 10+ scenarios.
- Scraped infusion center data with multi-selector logic, ActionChains, and iframe CAPTCHA handling across 15+ pages.
- Engineered a Python pipeline using Pandas and regex to extract financial metrics from more than 200 program descriptions, normalize monetary values, compute key summaries, and export data to CSVs, reducing manual data processing time by 40%.

DoodhSaathi – Flutter App Developer | October 2024 - Jan 2025

Remote

- Spearheaded end-to-end build of an agri-tech app (e-commerce, cattle-health tracking, vet helpline), driving a 35% jump in sign-ups and reducing livestock mortality by 25%.
- Streamlined authentication workflows and overhauled performance—boosting app speed by 50% and trimming package size by 40% via Provider & Firestore.

PROJECTS

Use AI

Next.js, Postman

- Developed an AI-driven image editor (Next.js, React, Tailwind, Cloudinary) that automates background removal—cutting edit time by 80%.
- Crafted responsive UI components (shadcn/ui) and embedded secure middleware, delivering 100% compliance with best-practice standards.
- Created secure authentication middleware, achieving 100% compliance with security standards.

SmartMail AI

Express, Node.js, Postman

- Deployed dual-token JWT authentication with OAuth 2.0 Gmail integration, bcrypt hashing, device-management, and rate limiting for 1,000+ concurrent users.
- Formulated Gmail analytics APIs using MongoDB aggregation—processing 10,000+ emails for top-sender rankings in under 2 seconds.
- Launched a high-throughput mail-merge system (25 MB uploads, bulk processing, 15+ endpoints) with 99.9% uptime.

CODING & PROBLEM SOLVING

- Solved 250+ Data Structures & Algorithms problems across arrays, graphs, dynamic programming, and system design patterns.
